

■ Veterinary Online Consultation Platform

Figma Low-Fidelity Wireframe Specification — V1

A Figma-ready specification for designing the veterinary online consultation platform before frontend/backend development.

1. Figma File Structure

- 00 — Cover & Notes
- 01 — Design System: Colors, Typography, Spacing, Buttons, Inputs, Cards, Navigation, Icons
- 02 — Public Website: Home, Veterinarians, Doctor Profile, Services, FAQs, Login, Register
- 03 — Pet Owner: Dashboard, My Pets, Pet Profile, Medical Records, Veterinarian Search, Booking, Payment, Appointment Confirmation, Appointments, Consultation, Messages, Prescriptions
- 04 — Veterinarian: Dashboard, Appointments, Patients, Patient Profile, Consultation, Prescription, Availability, Profile
- 05 — Admin: Dashboard, Veterinarians, Users, Appointments, Payments, Reviews, Settings
- 06 — Mobile: Owner and Doctor

2. Figma Frame Sizes

- Desktop: 1440 × 1024 px
- Tablet: 1024 × 1366 px
- Mobile: 390 × 844 px
- Desktop grid: 12 columns, 24 px gutter, 80 px margins.
- Dashboard layout: 240 px sidebar, 32 px main-content padding.

3. Global Spacing System

- Use an 8-point system: 4, 8, 12, 16, 24, 32, 40, 48, 64, 80 px.
- Page-to-section: 48–64 px; card-to-card: 24 px; card padding: 24 px; form-field gap: 16 px; label-to-input: 8 px; buttons: 44–48 px high; inputs: 48 px high; radius: 8–12 px.

4. Low-Fidelity Visual Language

- Wireframe stage should use grayscale only: background #F7F7F7, cards #FFFFFF, text #222222, secondary text #666666, borders #DDDDDD.
- Use placeholder blocks such as [IMAGE], [ICON], and [AVATAR]. Do not spend time on final colors, shadows, gradients, or illustrations.

5. Typography

- Recommended font: Inter.
- H1 40 px Bold; H2 32 px Bold; H3 24 px Semibold; H4 18 px Semibold; Body 16 px Regular; Small 14 px Regular; Caption 12 px Regular.

6. Reusable Components

- Buttons: Primary, Secondary, Text, Danger, Icon Button.
- Inputs: Text, Search, Dropdown, Date, Time, Textarea, Checkbox, Radio.
- Cards: Doctor Card, Pet Card, Appointment Card, Prescription Card, Medical Record Card, Notification Card, Statistic Card.
- Feedback: Success, Error, Warning, Empty State, Loading.
- Modals: Confirmation, Cancel Appointment, Upload Document, Add Pet.

7. Public Website — Homepage

- Header: 72 px high; logo on left; navigation Home, How It Works, Services, Veterinarians, FAQs; Login and Book Now on right.
- Hero: two-column layout, roughly 50/50. Left contains headline, supporting text, Book Consultation and Find a Veterinarian CTAs. Right contains a large pet image placeholder.
- How It Works: four cards — Add Pet, Find Vet, Book, Consult.
- Services: six cards — General Consultation, Nutrition, Skin & Allergy, Dental, Behaviour, Puppy/Kitten.
- Veterinarian Preview: four doctor cards with photo, name, specialization, rating, experience, price, View Profile.
- Emergency notice before footer explaining that online consultation is not a replacement for emergency veterinary care.
- Footer: Company, Services, Support, Social.

8. Authentication

- Login: centered 420 px card with logo, Welcome Back, email, password, forgot-password, Login, optional Google sign-in, and Register link.
- Register: two-column layout with pet-care visual on left and Full Name, Email, Phone, Password, Create Account on right.

9. Pet Owner Global Layout

- Desktop: 240 px sidebar + 72 px header + main content with 32 px padding.
- Sidebar: Dashboard, My Pets, Find Veterinarian, Appointments, Messages, Medical Records, Prescriptions, Notifications, Settings, Profile, Logout.
- Header: search on left/center, notification icon, avatar and user menu on right.
- Mobile: hide sidebar and use bottom navigation: Home, Appointments, Pets, Messages, Profile.

10. Owner Dashboard

- Welcome message at top.
- Statistic cards: My Pets, Upcoming, Consultations.
- My Pets section with Pet Cards and Add Pet CTA.
- Upcoming Appointment card with doctor, consultation type, pet, date/time, Join Consultation CTA.
- Quick actions: Add Pet, Book Consultation, Medical Records, Prescriptions.

11. Pet Management

- My Pets: grid of Pet Cards with photo, name, species, age, View and Edit.
- Add Pet form: photo, name, species, breed, gender, date of birth, weight, color, allergies, existing medical conditions, current medications.
- Pet Profile header: photo, name, breed, gender, age, weight, Edit Profile.
- Pet Profile tabs: Overview, Medical History, Vaccinations, Documents, Consultations, Prescriptions.
- Overview cards: Basic Information, Health Information, Next Follow-up.

12. Veterinarian Search & Profile

- Search page: search bar plus filters for species, specialization, consultation type, availability, and price.
- Doctor cards should show photo, name, specialty, rating, experience, price, View Profile.
- Doctor profile: photo, name, specialty, rating, experience, education, languages, specializations, About, Reviews, and Book Consultation.
- Consultation options: Video, Audio, Chat with duration and price.

13. Booking Flow

- Use a five-step progress indicator: 1 Pet → 2 Type → 3 Date → 4 Problem → 5 Payment.

- Step 1: select pet or add new pet.
- Step 2: select video/audio/chat consultation.
- Step 3: calendar on left and available time slots on right.
- Step 4: symptoms textarea, when it started, severity, and photo/video/PDF upload.
- Step 5: booking summary, consultation fee, platform fee, total, payment method, Pay button.
- After payment: confirmation screen with success indicator, doctor, pet, date/time, consultation type, appointment ID, Add to Calendar, View Appointment, Back to Dashboard.

14. Appointments & Medical Records

- Appointments page: Upcoming, Completed, Cancelled tabs. Appointment cards include doctor, pet, type, date/time, View Details and Join Consultation.
- Medical Records page: Upload Record CTA, filters All/Reports/Prescriptions/Images/X-Rays, record cards with View and Download.
- Prescription page: doctor, pet, diagnosis, medicines with dosage/frequency/duration/instructions, additional instructions, follow-up, Save Prescription, Download PDF.

15. Consultation Experience

- Desktop consultation layout: large video area with 320 px patient-information sidebar.
- Bottom controls: Mute, Camera, Chat, Files, More, End Consultation.
- Patient sidebar tabs/information: pet details, allergies, medical history, records.
- Chat drawer: message history, attachment button, message input, send.
- Doctor end-of-consultation form: Symptoms, Assessment/Diagnosis, Treatment Plan, Follow-up, Create Prescription, Complete Consultation.
- Emergency notice should be clearly accessible.

16. Veterinarian Portal

- Sidebar: Dashboard, Appointments, Patients, Messages, Medical Records, Prescriptions, Availability, Earnings, Profile, Settings, Logout.
- Doctor Dashboard: greeting, Today, Completed, Upcoming, Earnings statistics, and today's appointment timeline/list.
- Appointment page: pet information, appointment date/time/type, Start Consultation.
- Patient Profile tabs: Overview, Medical History, Consultations, Prescriptions, Documents, Vaccinations.
- Availability: weekly schedule, working hours, consultation duration, buffer time, Save Schedule.
- Doctor Profile: professional details, qualifications, experience, specializations, languages, consultation types.

17. Admin Portal

- Sidebar: Dashboard, Veterinarians, Users, Pets, Appointments, Consultations, Payments, Reviews, Notifications, Reports, Settings, Logout.
- Admin Dashboard: Users, Doctors, Appointments, Revenue statistics; appointments/revenue charts; recent appointments; recent users; pending doctor approvals.
- Doctors table: doctor, specialization, experience, status, action; Add Doctor; search; review/verification flow.
- Users table: name, email, pets, appointments, status, actions.
- Payments table: transaction ID, user, doctor, amount, status, date; include Paid, Pending, Failed, Refunded states.

18. Mobile Design

- Mobile frame: 390 × 844 px with 16 px side padding.
- Do not simply shrink desktop layouts; redesign for mobile.
- Owner bottom navigation: Home, Appointments, Pets, Messages, Profile.

- Booking should use one step per mobile screen.
- Video consultation should use almost the full screen for video with compact bottom controls; pet information can open as a bottom sheet.

19. Figma Naming & Auto Layout

- Component naming: Button/Primary, Button/Secondary, Button/Danger; Input/Text, Input/Search, Input/Dropdown; Card/Pet, Card/Doctor, Card/Appointment; Navigation/Sidebar/Owner, Navigation/Sidebar/Doctor, Navigation/Sidebar/Admin; Modal/Confirmation, Modal/Upload.
- Use Auto Layout everywhere possible. Example Doctor Card: vertical Auto Layout, 24 px padding, 16 px gap, then image, doctor name, specialization, rating, price, button.
- Interactive components should have Default, Hover, Pressed, Disabled, and Loading states.
- Inputs should have Default, Focused, Filled, Error, and Disabled states.

20. Empty States & Modals

- Create reusable empty states for no appointments, no pets, no messages, no prescriptions, no medical records, and no search results.
- Important modals: Cancel Appointment, Upload Medical Record, Add Pet, Confirmation.

21. Prototype Navigation

- Primary clickable prototype: Home → Login → Owner Dashboard → Find Vet → Doctor Profile → Select Pet → Select Date/Time → Consultation Info → Payment → Confirmation → Appointment → Join Consultation → Prescription.
- Every screen should provide an obvious back path using ← Back where appropriate.
- Each screen should have one primary CTA: Book Consultation, Continue, Pay, View Appointment, Join Consultation, Complete Consultation, or Save Prescription.

22. Recommended Build Order

- Phase 1: Homepage, Login, Owner Dashboard, Add Pet, Pet Profile, Veterinarian Search, Doctor Profile, Booking, Payment, Confirmation, Appointment, Consultation, Prescription.
- Phase 2: Appointments, Medical Records, Messages, Notifications, Profile, Settings.
- Phase 3: Doctor Dashboard, Appointments, Patients, Patient Profile, Consultation, Prescription, Availability, Profile.
- Phase 4: Admin Dashboard, Doctors, Users, Pets, Appointments, Payments, Reviews, Reports, Settings.
- Phase 5: Mobile versions of the key owner and consultation flows.

23. Final Screen Inventory

- Public: approximately 7 screens.
- Owner: approximately 13 screens.
- Veterinarian: approximately 8 screens.
- Admin: approximately 9 screens.
- Mobile: approximately 10 key frames.
- Target total: approximately 47 frames, supported by reusable components.

24. Core UX Principle

- The wireframe should prove that the main owner journey is intuitive: Pet Owner → My pet is sick → Find a Vet → Choose Doctor → Book Slot → Pay → Talk to Doctor → Get Treatment → Save Medical Record.
- Do not start with high-fidelity styling. First make the grayscale flow clickable and validate the UX.

Core Screen Inventory

Area	Approx. Screens	Priority
Public Website	7	High
Pet Owner	13	Critical
Veterinarian	8	Critical
Admin	9	High
Mobile	10 key frames	High
Total	~47 frames	—

Primary prototype path: Home → Login → Owner Dashboard → Find Vet → Doctor Profile → Select Pet → Select Date/Time → Consultation Info → Payment → Confirmation → Appointment → Consultation → Prescription
